IKEA's TECHNOLOGICAL IMPLEMENTATION

Augmented Reality and Virtual Reality (AR/VR):

IKEA Kreativ uses AR and VR for room design, allowing customers to scan their space, design it with IKEA products, and visualize the outcome before making a purchase. This technology is supported by machine learning and 3D technology on a scalable, cloud-based platform, enhancing the shopping experience both online and in stores.

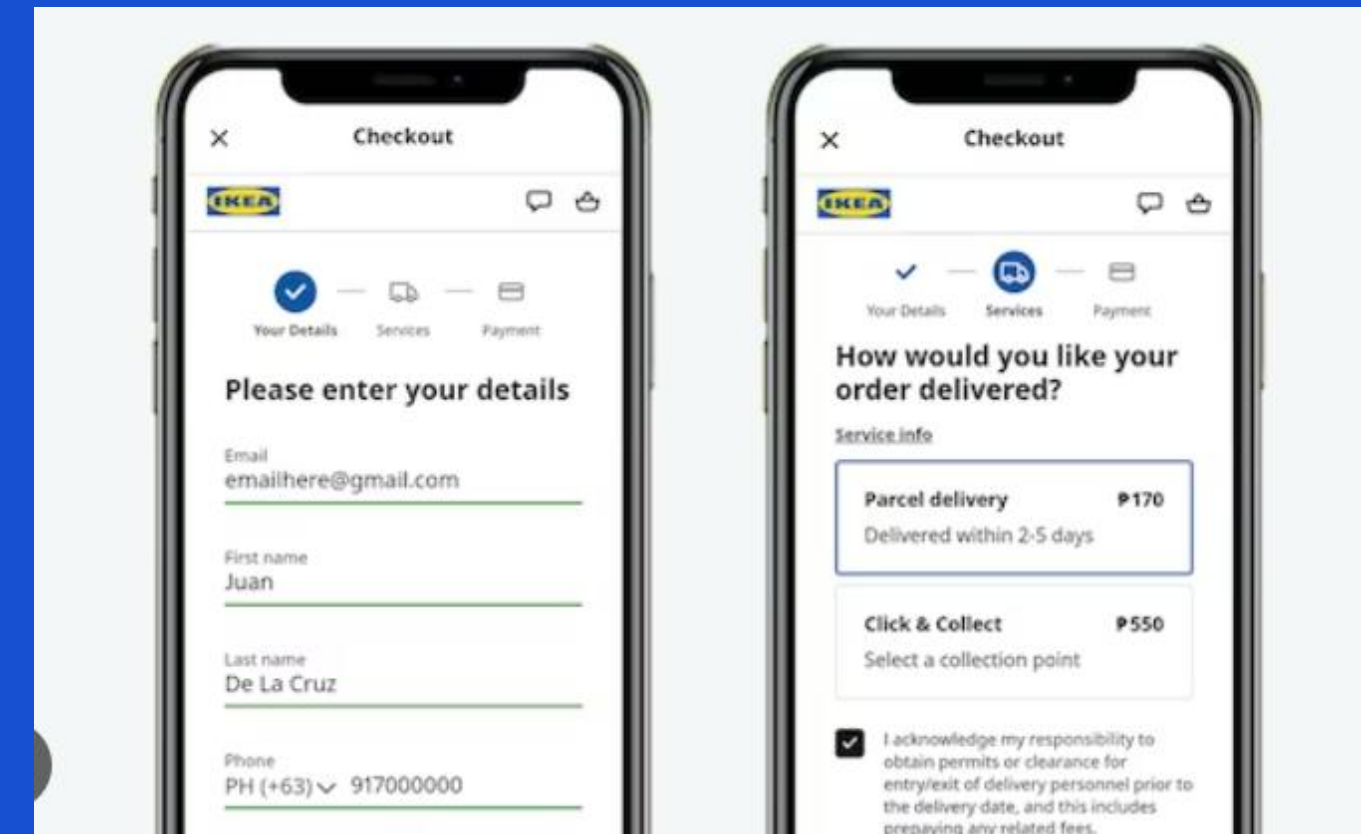

3D Technology:

The introduction of IKEA Kreativ in the US showcases IKEA's commitment to digital innovation, allowing customers to take a 3D scan of their rooms to place and visualize IKEA furniture, even allowing the removal of existing furniture in the visualization. This tool aims to provide a more immersive and engaging shopping experience.

IKEA's TECHNOLOGICAL IMPLEMENTATION

Mobile Technology -

The IKEA app features innovative functionalities like “Shop-and-Go” feature, allowing customers to scan and pay for the products to be purchased using the Mobile app itself. This in turn reduces the wait time for them at the checkout counters.

Buy Now, Pay Later (BNPL):

IKEA has ventured into BNPL options in collaboration with Afterpay, offering customers the flexibility to make purchases in installments. This payment option aligns with consumer trends towards manageable spending and making larger purchases more accessible.
